3M™ Magnetic Signs

for Color Laser Printers and Copiers

Tipsheet for:

Canon CLC5000

General Instructions:

When printing, use the straightest paper path and a Cardstock or Heavy Paper mode. It is essential that you fuse the toner to the imaging sheet well enough that it does not scratch off easily with a fingernail. Do not touch the unprinted surface of the imaging sheet or "kink" the sheet before printing. Fan the ream if needed before printing multiple sheets.

Printing instructions for your *Canon CLC5000*:

Select "Special Paper 2" for the best image quality.

Fade Resistance for your *Canon CLC5000*:

High - Indoor and Long Term Outdoor Use

What the Fade Resistance Means:

NOTE: Fading performance for copiers is not guaranteed.

The Fade Resistance is based on colors containing magenta toner. This is because fading is mostly limited to colors containing magenta. The other toners, cyan, yellow and black usually have much longer lives (would have a "High" or better rating.) Note that based on our testing, all copiers provide excellent indoor fade resistance.

Low - Your copier is suitable for long term indoor and short term or intermittent outdoor applications. Service life outdoors is probably less than 6 months depending on actual sun exposure and climate.

Medium - Your copier is suitable for long term indoor and medium term outdoor applications. Service life outdoors is probably 6 – 12 months depending on actual sun exposure and climate.

High - Your copier is suitable for long term indoor and long term outdoor applications. Service life outdoors is probably 12 – 24 months depending on actual sun exposure and climate.
